

I'm not a robot!

Hey everyone so today frontier just installed their service for 500/500 with the provided modem/router in our home to replace our spectrum isp however, we've had nothing but issues once frontier was up and running. Direct LAN connection works fine but wifi is another story. Everyone in our home either gets booted off and needs to reconnect or the SSID doesn't even show up when trying to connect. I thought it was the router provided by them so I switched out to another router I had purchased and used for spectrum and it was still having the same issues. I just find very fishy because spectrum never gave us this issues and I was using the same router.also I'm located in SoCal.Any thoughts? Thanks!
